

Composite materials

a beauty of new biobased materials

©iam

Many building materials today belong to the class of composite materials. For the development of green building, the knowledge and application of materials that adapt their composite nature to the desired goals is inevitable. After the stone, bronze, iron or polymer ages, we are now in the age of composite materials.

Prof. Irena Živković is a technologist and teaching professor at University of Arts in Belgrade. Her scientific work is focused on composite materials for wide range of application.

She teaches material science and engineering to students of design, applied arts, and conservation and restoration.
